## **Data Sheet Definitions and Conditions**

This data sheet provides performance information for Keysight N9032B Signal Analyzers.

**Specifications** describe the performance of parameters covered by the product warranty and apply to temperature ranges 0 to 55 °C, unless otherwise noted.

**95th percentile** values indicate the breadth of the population (approx.  $2 \sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

**Typical** values (typ) describe additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

**Nominal** values (nom) indicate expected performance or describe product performance that is useful in the application of the product but are not covered by the product warranty.

The analyzer will meet its specifications when:

- It is within its calibration cycle.
- Under auto couple control, except that Auto Sweep Time Rules = Accy
- For signal frequencies < 10 MHz, DC coupling applied.
- Analyzer is used in environment that falls within allowed operating range; and has been in that environment at least 2 hours before being turned on.
- Analyzer has been turned on at least 30 minutes with AutoAlign set to Normal; or, if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. Note that factory default is with the AutoAlign set to Light, which (compared to Normal) allows wider temperature changes before causing Alignments to run automatically. The benefit is that Alignments interrupt less frequently. The user can change AutoAlign to Normal if desired, and this setting will persist after power cycle or PRESET. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. In practice, the impact of such choices is primarily on Absolute Amplitude Accuracy. If temperature changes are small, the impact of Light vs Normal is negligible. Also, the user may invoke Align All at any time, to get the best possible accuracy.
- The term "mixer level" is used as a condition for many specifications in this document. This term is a conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) (Mechanical Attenuation) (dB) (Electronic Attenuation) (dB).
- The term "attenuation" is used for many specifications in this document; this refers to the Mechanical Attenuator, unless otherwise stated.

Common abbr	eviations
BW	bandwidth
FBP	full bypass path
FFT	fast Fourier transform
IQ	in-phase quadrature-phase (sample data)
IVL	Individual validated license (for export to restricted countries)
LNA	low-noise amplifier
LNP	low-noise path
LO	local oscillator
PA	pre-amplifier
MPB	microwave preselector bypass
RBW	resolution bandwidth (filter)
VBW	video bandwidth (filter)

# **Frequency and Time Specifications**

Frequency option	Frequency range DC coupled			
508	2 Hz to 8.4 GHz			
513	2 Hz to 13.6 GHz			
526	2 Hz to 26.5 GHz			
544	2 Hz to 44 GHz			
550	2 Hz to 50 GHz			
555	2 Hz to 55 GHz			
Minimal frequency	DC coupled	AC coupled (option 508, 513 and 526)		
PA off, LNA off	2 Hz	10 MHz		
PA on	9 kHz	10 MHz		
LNA on	20 MHz	20 MHz		
Swept spectrum analysis (these bands are not applied	cable to wide-bandwidth IQ analysis)			
Swept frequency band	LO multiple (N)	Frequency range		
0	1	2 Hz to 3.6 GHz		
1	1	3.5 to 8.4 GHz		
2	2	8.3 to 13.6 GHz		
3	2	13.5 to 17.1 GHz		
4	4	17.0 to 26.5 GHz		
5	4	26.4 to 34.5 GHz		
6	8	34.4 to 55 GHz

# **Triggers and Gating**

s	Swept trigger	Gate source	Wide bandwidth IQ trigger	Supplemental information
Free Run Y	(		Y	
External 1		Y	Y	
External 2		Y	Y	Jitter up to ~33 ns p-p (nominal)
External 3			Y	Jitter < 20 ps (nominal)
RF Burst	(	Y		IF Path $\leq$ 40 MHz only
Video (IF Mag)		· ·	Y	In 255 MHz IF Path only; at greater bandwidths, ADC trigger is simila
ADC			Y	Similar to Video, but operates digitally on mag[I,Q], prior to decimation, filtering, and corrections. Available for bandwidth > 255 MHz.
Line Y	(	Y	Y	
Periodic	(	Y	Y	Repetitive "frame" trigger, at precise interval, following an External o RF Burst trigger
TV ۲	(	Y		
Triggers				
Video (independent of Dis and Reference Level)	splay Scaling	Specifications		Supplemental information
, Minimum settable level		-170 dBm		Useful range limited by noise
Maximum usable level				Highest allowed mixer level (the highest allowed mixer level depends on the IF Gain. It is nominally –10 dBm for Preamp Off and IF Gain = Low) + 2 dB (nominal)
Detector and sweep type	relationships			
				Supplemental information
Sweep Type = Swept				
Detector = Normal, Peak, Sample or Negative Peak			Triggers on the signal before detection, which is similar to the displayed signal	
Detector = Average				Triggers on the signal before detection, but with a single-pole filter added to give similar smoothing to that of the average detector
Sweep Type = FFT				Triggers on the signal envelope in a bandwidth wider than the FFT width
RF Burst		Specifications		Supplemental information
Level range		-40 to -10 dBm plus attenuation (nominal)		Noise will limit trigger level range at high frequencies, such as above 15 GHz
Level accuracy				
With positive slope trigger.	Trigger level with	negative slope is	nominally 1 to 4 dB lov	wer than positive slope.
Absolute		± 2 dB + Absolute Amplitude Accuracy (nominal)		
Relative		$\pm 2 \text{ dB} (\text{nominal})$		
		(	,	1
Bandwidth (-10 dB) Most cases (set align product on the product of		inal)		
(including RF Burst Level T Start Freq < 300 MHz				
RF Burst Level Type = Absolute				
Sweep Type = Swept		16 MHz (nomin	aı)	
Sweep Type = FFT		> 00 MILL (	I)	
	FFT Width > 25 MHz > 80 MHz (nominal)			
FFT Width 8 to 25 MI	Hz	30 MHz (nomin	,	
FFT Width < 8 MHz		16 MHz (nomin	al)	
Frequency Limitations			If the start or center frequency is too close to zero, LO feedthrough can degrade or prevent triggering. How close is too close depends or the bandwidth listed above.	
Amplitude Requirements				-65 dBm minimum video carrier power at the input mixer, nominal

# **Amplitude Accuracy and Range Specifications**

Amplitude characteristics vary by user-selectable front-end path. Swept SA measurements are normally made with preselector on (in circuit). These settings impact amplitude accuracy and range.

Front e	end settings		
1a		Preselector	Default selection following power-on, boot-up, or PRESET. Settings provide best dynamic range and lowest internally-generated distortion. Suitable for harmonics, IMD, spurious in presence of large signals, etc. unless noise-limited.
1b	Standard path	Preselector, LNA on	Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide lower DANL, compared to 1a, while preserving very good dynamic range. Suitable for distortion measurements (harmonics, IMD, etc.) when a lower noise floor is needed.
1c		Preselector, PA on	Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide lower DANL, compared to 1b.
1d		Preselector, LNA on, PA on	Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide lowest possible DANL, compared to 1c. Best for finding low-level spurs, oscillations, etc. near the noise floor. Allows use of wider RBW setting to achieve equivalent noise floors, so can make spur searching faster.
2a	Lever a size weth	Preselector, LNP	Bypasses the preamplifier. Settings provide the lowest distortion and best dynamic range, yet with lower DANL at higher frequencies, when compared with 1a. Path not active below 3.6 GHz.
2b	Low-noise path (LNP)	Preselector, LNP, LNA on	Bypasses the preamplifier. Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide the lower DANL, compared to 2a, while preserving very good dynamic range. Path not active at below 3.6 GHz.
3a		MPB	Bypasses preselector. Settings provide very good EVM floor at mid-high input power region (using attenuation), including below 3.6 GHz. Good for wideband digitizer and FFT measurements. Recommend using path 4a if above 3.6 GHz.
3b	Microwave Preselector	LNA on	Bypasses preselector. Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide best EVM at low input power for below 3.6 GHz. Good for wideband digitizer and FFT measurements. Otherwise use path 4b if above 3.6 GHz.
3c	Bypass path (MPB)	PA on	Bypasses preselector. Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Good for wideband digitizer and FFT measurements. Settings allowed only for very low power levels since preselector is bypassed. Not generally recommended for digital demodulation.
3d		LNA on, PA on	Bypasses preselector. Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Good sensitivity for narrowband swept measurements only. Not generally recommended for digital demodulation.
4a		LNP, MPB	Bypasses both preamplifier and preselector. Settings provide best EVM floor for mid-high input power region (using attenuation) for above 3.6 GHz. Best for wideband digitizer and FFT measurements. Otherwise use path 3a if below 3.6 GHz.
4b	Full Bypass path (FBP)	LNP, MPB, LNA on	Bypasses both preamplifier and preselector. Requires P08, P13, P26, P44, P4L, P50, P5L, P55, or P5N. Settings provide best EVM floor for low input power region (using attenuation) for above 3.6 GHz. Best for wideband digitizer and FFT measurements. Otherwise use path 3b if below 3.6 GHz.

Amplitude range	
Measurement range	Displayed average noise level (DANL) to +30 dBm (for preamp Off) DANL to +24 dBm (for frequency opts $\leq$ 526 with preamp On) DANL to +20 dBm (for frequency opts > 526 with preamp On)
Input mechanical attenuator range (2 Hz to 55 GHz)	0 to 70 dB in 2 dB steps
Electronic attenuator (option EA3)	
Frequency range	2 Hz to 3.6 GHz
Attenuation range	
Electronic attenuator range	0 to 24 dB, 1 dB steps
Full attenuation range (mechanical + electronic)	0 to 94 dB, 1 dB steps
Maximum safe input level (max applied to RF input connector)	
Average total power (with and without preamp)	+30 dBm (1 W)
Peak pulse power (< 10 $\mu$ s pulse width, < 1% duty cycle, and input attenuation $\ge$ 30 dB)	+50 dBm (100 W)
DC volts	
DC coupled	± 0.2 Vdc
AC coupled (Option 508,513 or 526)	± 100 Vdc
Display range	
Log scale	0.1 to 1 dB/division in 0.1 dB steps 1 to 20 dB/division in 1 dB steps (10 display divisions)
Linear scale	10 divisions
Scale units	dBm, dBmV, dBµV, dBmA, dBµA, V, W, A

## **Frequency Response**

### 1a. Standard path frequency response (swept, preselector on, LNA off, PA off)

10 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30° C	Typical, unless otherwise stated
2 Hz to 30 MHz	± 0.50 dB	± 0.40 dB	± 0.15 dB
> 30 MHz to 50 MHz	± 0.40 dB	± 0.35 dB	± 0.20 dB
> 50 MHz to 3.6 GHz	± 0.60 dB	± 0.35 dB	± 0.20 dB
> 3.6 to 5.2 GHz	± 3.50 dB	± 1.70 dB	± 1.00 dB
> 5.2 to 8.4 GHz	± 2.50 dB	± 1.50 dB	± 0.60 dB
> 8.4 to 13.6 GHz	± 2.00 dB	± 1.50 dB	± 0.60 dB
> 13.6 to 17.1 GHz	± 2.20 dB	± 1.50 dB	± 0.60 dB
> 17.1 to 22.0 GHz	± 2.30 dB	± 1.50 dB	± 0.60 dB
> 22.0 to 26.5 GHz	± 2.50 dB	± 2.00 dB	± 0.70 dB
> 26.5 to 34.5 GHz	± 3.50 dB	± 2.30 dB	± 1.00 dB
> 34.5 to 36.5 GHz	± 5.20 dB	± 2.50 dB	± 1.50 dB
> 36.5 to 55.0 GHz	± 5.20 dB	± 3.10 dB	± 1.50 dB

### 1b. Standard path, LNA on frequency response (swept, preselector on, LNA on, PA off) 0 dB input attenuation, relative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz

Frequency	Full range	20 to 30° C	Typical, unless otherwise stated
30 MHz to 3.6 GHz	± 0.70 dB	± 0.50 dB	± 0.20 dB
> 3.6 to 5.2 GHz	± 3.50 dB	± 1.90 dB	± 1.10 dB
> 5.2 to 8.4 GHz	± 2.70 dB	± 1.70 dB	± 0.70 dB
> 8.4 to 13.6 GHz	± 2.30 dB	± 1.70 dB	± 0.70 dB
> 13.6 to 17.1 GHz	± 2.60 dB	± 1.70 dB	± 0.70 dB
> 17.1 to 22.0 GHz	± 2.80 dB	± 1.90 dB	± 0.70 dB
> 22.0 to 26.5 GHz	± 3.00 dB	± 2.30 dB	± 0.80 dB
> 26.5 to 34.5 GHz	± 3.70 dB	± 2.60 dB	± 1.20 dB
> 34.5 to 55.0 GHz	± 5.30 dB	± 3.20 dB	± 1.60 dB

Frequency	Full range	20 to 30° C	Typical, unless otherwise stated
9 kHz to 100 kHz			± 0.40 dB (nom)
> 100 kHz to 50 MHz	± 0.80 dB	± 0.68 dB	± 0.35 dB
> 50 MHz to 3.6 GHz	± 0.80 dB	± 0.60 dB	± 0.20 dB
> 3.6 to 5.2 GHz	± 3.50 dB	± 2.30 dB	± 1.20 dB
> 5.2 to 8.4 GHz	± 2.70 dB	± 2.00 dB	± 0.80 dB
> 8.4 to 13.6 GHz	± 2.50 dB	± 2.00 dB	± 0.80 dB
> 13.6 to 17.1 GHz	± 2.50 dB	± 2.00 dB	± 0.95 dB
> 17.1 to 22.0 GHz	± 2.90 dB	± 2.20 dB	± 0.95 dB
> 22.0 to 26.5 GHz	± 3.70 dB	± 2.70 dB	± 1.20 dB
> 26.5 to 34.5 GHz	± 4.50 dB	± 2.90 dB	± 1.30 dB
> 34.5 to 55.0 GHz	± 5.20 dB	± 3.40 dB	± 1.60 dB

• • • •	frequency response (low-noise path enabled, preselector on, LNA on, PA off) ative to reference conditions (50 MHz), preselector centering applied above 3.6 GHz
Frequency	Frequency response (nominal)

Electronic attenuator (option EA3) frequency response							
Maximum error relative to reference conditions (50 MHz). Me	echanical attenuation set to de	efault/calibrated setting of 10 dB.					
Frequency	Full range	20 to 30 °C	Typical, unless stated otherwise				
2 Hz to 9 kHz	± 0.80 dB	± 0.60 dB	± 0.25 dB				
9 kHz to 50 MHz	± 0.80 dB	± 0.60 dB	± 0.25 dB				
50 MHz to 3.6 GHz	± 0.60 dB	± 0.40 dB	± 0.20 dB				

Note: Signal frequencies above 18 GHz are prone to additional response errors due to modes in the Type-N connector used. Only analyzers with frequency Option 526 that do not also have input connector Option C35 will have these modes. With the use of Type-N to APC 3.5 mm adapter part number 1250-1744, there are nominally six such modes. The effect of these modes with this connector are included within these specifications.

> 3.6 to 8.4 GHz	± 0.5 dB	
> 8.4 to 26.5 GHz	± 0.7 dB	
> 26.5 to 55 GHz	± 1.0 dB	

#### Total absolute amplitude accuracy (at 50 MHz)

At 50 MHz, 10 dB attenuation, RBW < = 1 MHz, input signal -10 to -50 dBm, all settings auto-coupled except Auto Swp Time = Accy, any Reference Level, any vertical Scale.

Path	Full range	20 to 30 °C	Typical	AutoAlign = Light, nominal
1a. Std	± 0.35 dB	± 0.30 dB	± 0.10 dB	± 0.17 dB
1b. Std (LNA on, preamp off)	± 0.40 dB	± 0.35 dB	± 0.15 dB	± 0.19 dB
1c. Std (LNA off, preamp on)	± 0.40 dB	± 0.35 dB	± 0.15 dB	± 0.17 dB
With electronic attenuator				
(at 50MHz, 0 to 24 dB attenuation, RI any vertical Scale)	BW < = 1 MHz, input signal	-7 to -25 dBm, all settin	gs auto-coupled exce	pt Auto Swp Time = Accy, any Reference Level,
· · ·	± 0.35 dB	± 0.30 dB	± 0.10 dB	± 0.17 dB

For absolute amplitude accuracy at any f	requency, use the following formulas:
At any frequency	± (Abs Amp at 50 MHz + Frequency Response)
Wide range of signal levels, resolution bandwidths, reference levels, attenuation = 10 dB, 10 Hz to 3.6 GHz	± 0.20 dB, 95 <sup>th</sup> percentile
	total of all amplitude measurement errors, and applies over the following subset of settings and conditions:
$1 \text{ Hz} \le \text{RBW} \le 1 \text{ MHz}$	
Input signal -10 to -50 dBm (details belo	w)
Input attenuation 10 dB	
Span < 5 MHz (nominal additional error f	or span ≥ 5 MHz is is 0.02 dB)
All settings auto-coupled except Swp Tin	ne Rules = Accuracy
Combinations of low signal level and wid	e RBW use VBW ≤ 30 kHz to reduce noise
When using FFT sweeps, the signal mus	t be at the center frequency.
This absolute amplitude accuracy specificat	ion includes the sum of the following individual specifications under the conditions listed above: Scale Fidelity,
Reference Level Accuracy, Display Scale S	witching Uncertainty, Resolution Bandwidth Switching Uncertainty, 50 MHz Amplitude Reference Accuracy, and
the accuracy with which the instrument aligr	is its internal gains to the 50 MHz Amplitude Reference. The only difference between signals within the range
above -50 dBm and those signals below that	at level is the scale fidelity. Our specifications and experience show no difference between signals above and
below this level. The only reason our Absolu	te Amplitude Uncertainty specification does not go below this level is that noise detracts from our ability to verify
the performance at all levels with acceptable	e test times and yields. So the performance is not warranted at lower levels, but we fully expect it to be the same.

Note 2: Absolute amplitude accuracy for a wide range of signal and measurement settings, covers the 95th percentile proportion with 95% confidence. Here are the details of what is covered and how the computation is made:

The wide range of conditions of RBW, signal level, VBW, reference level and display scale are described above.

There are 44 quasi-random combinations used, tested at a 50 MHz signal frequency.

We compute the 95th percentile proportion with 95% confidence for this set observed over a statistically significant number of instruments.

Also, the frequency response relative to the 50 MHz response is characterized by varying the signal across a large number of quasi-random verification frequencies that are chosen to not correspond with the frequency response adjustment frequencies.

We again compute the 95th percentile proportion with 95% confidence for this set observed over a statistically significant number of instruments. We also compute the 95th percentile accuracy of tracing the calibration of the 50 MHz absolute amplitude accuracy to a national standards organization.

We also compute the 95th percentile accuracy of tracing the calibration of the relative frequency response to a national standards organization We take the root-sum-square of these four independent Gaussian parameters

To that RSS we add the environmental effects of temperature variations across the 20 to 30°C range.

These computations and measurements are made with the mechanical attenuator only in circuit, set to the reference state of 10 dB.

Standard path, 10 dB ir	nput attenuation,	50 MHz (referen	ce condition	)	1.09:1 (nominal)	
Standard path, 0 dB ing	out attenuation, 0	2.05:1 (nominal)				
Frequency	Option			1a Std, LNA off, PA off	1b Std, LNA on, PA off 1d Std, LNA on, PA on	1c Std, LNA off, PA on IF Path ≤ 40 MHz
	508, 513, and 526	544 and 550	555	(10 dB attenuation)	IF Path ≤ 40 MHz (0 dB attenuation)	(0 dB attenuation)
10 MHz to 3.6 GHz	X	x		1.20	1.30	1.70
			Х	1.20	1.30	1.80
0.01-0.4.011	х	х		1.30	1.50	1.60
3.6 to 8.4 GHz			Х	1.40	1.60	1.70
8.4 to 13.6 GHz	х			1.50	1.60	1.60
0.4 10 13.0 GHZ		х	х	1.30	1.40	1.50
	Х			1.60	1.70	1.70
13.6 to 17.1 GHz		х	х	1.30	1.40	1.40
	Х			1.80	1.80	1.80
17.1 to 26.5 GHz		х		1.40	1.40	1.50
			Х	1.60	1.60	1.70
		х		1.50	1.60	1.60
26.5 to 34.5 GHz			Х	1.70	1.70	1.80
		х		1.70	1.70	1.80
34.5 to 50 GHz			х	1.80	1.80	1.90
50.0 to 55.0 GHz			х	1.70	1.70	1.70

The magnitude of the mismatch over the range of frequencies will be very similar between MPB and non-MPB operation, between LNP and non-LNP operation, and between FBP and non-FBP operation, but the details, such as the frequencies of the peaks and valleys, will shift.

A similar process is used for computing the result when using the electronic attenuator under a wide range of settings: all even settings from 4 through 24 dB inclusive, with the mechanical attenuator set to 10 dB. The 95th percentile result was 0.20 dB.

## **Dynamic Range Specifications**

## 1 dB gain compression

#### Notes:

- Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal.

- Specified at 1 kHz RBW with 100 kHz tone spacing. The compression point will nominally equal the specification for tone spacing greater than 5 times the prefilter bandwidth. At smaller spacings, ADC clipping may occur at a level lower than the 1 dB compression point.

- Reference level and off-screen performance: The reference level (RL) behavior differs from some earlier analyzers in a way that makes this analyzer more flexible. In other analyzers, the RL controlled how the measurement was performed as well as how it was displayed. Because the logarithmic amplifier in these analyzers had both range and resolution limitations, this behavior was necessary for optimum measurement accuracy. The logarithmic amplifier in this signal analyzer, however, is implemented digitally such that the range and resolution greatly exceed other instrument limitations. Because of this, the analyzer can make measurements largely independent of the setting of the RL without compromising accuracy. Because the RL becomes a display function, not a measurement function, a marker can read out results that are off-screen, either above or below, without any change in accuracy. The only exception to the independence of RL and the way in which the measurement is performed is in the input attenuation setting: When the input attenuation is set to auto, the rules for the determination of the input attenuation, compression, and display scale fidelity) and small signal effects (noise), the measurement results can change with RL changes when the input attenuation is set to auto.

- Mixer power level (dBm) = total power at the input (dBm) - input attenuation (dB).

- Total power at the preamp (dBm) = total power at the input (dBm) - input attenuation (dB).

- The low noise path, when in use, does not substantially change the compression-to-noise dynamic range or the TOI-to-noise dynamic range because it mostly just reduces losses in the signal path in front of all significant noise, TOI and compression-affecting circuits. In other words, the compression threshold and the third-order intercept both decrease and to the same extent as that to which the DANL decreases.

### Standard path: 1 dB gain compression (swept, standard, preselector on)

Large signals, even at frequencies not shown on the screen, can cause the analyzer to mismeasure on-screen signals because of two-tone gain compression. This specification tells how large an interfering signal must be in order to cause a 1 dB change in an on-screen signal. Mixer power level (dBm) = total power at the input (dBm) – input attenuation (dB).

Center frequency	Gain compression (nominal)				
	1a. PA Off	1b. LNA	1c. PA		
20 to 40 MHz	+3 dBm	–16 dBm	–13 dBm		
> 40 MHz to 3.6 GHz	+6 dBm	–16 dBm	–13 dBm		
> 3.6 to 13.5 GHz	+5 dBm	–16 dBm	–27 dBm		
> 13.5 to 26.5 GHz	+1 dBm	–20 dBm	–30 dBm		
> 26.5 to 50 GHz	0 dBm	–16 dBm	-32 dBm		

#### IF prefilter bandwidth

This table applies without *Option FS1* or *FS2*, fast sweep. With *Option FS1* or *FS2*, which is a standard option in the UXA, this table applies for sweep rates that are manually chosen to be the same as or slower than "traditional" sweep rates, instead of the much faster sweep rates, such as autocoupled sweep rates, available with *FS1* or *FS2*. Sweep rate is defined to be span divided by sweep time. If the sweep rate is  $\leq 1.1$  times RBW-squared, the table applies. Otherwise, compute an "effective RBW" = Span / (SweepTime × RBW). To determine the IF Prefilter Bandwidth, look up this effective RBW in the table instead of the actual RBW. For example, for RBW = 3 kHz, Span = 300 kHz, and Sweep time = 42 ms, we compute that Sweep Rate = 7.1 MHz/s, while RBW-squared is 9 MHz/s. So the Sweep Rate is < 1.1 times RBW-squared and the table applies; row 1 shows the IF Prefilter Bandwidth is nominally 8.9 kHz. If the sweep time is 1 ms, then the effective RBW computes to 100 kHz. This would result in an IF Prefilter Bandwidth from the third row, nominally 303 kHz.

Zero span or swept, RBW=	Sweep Type = FFT, FFT width =	-3 dB bandwidth (nominal)
≤ 3.9 kHz	< 4.01 kHz	8.9 kHz
4.3 to 27 kHz	< 28.81 kHz	79 kHz
30 to 160 kHz	< 167.4 kHz	303 kHz
180 to 390 kHz	< 411.9 kHz	966 kHz
430 kHz to 10 MHz	< 7.99 MHz	10.9 MHz

# **Displayed Average Noise Level (DANL)**

Input terminated, Sample or Average detector, Averaging type set to Log, IF Gain = High, 1 Hz Resolution Bandwidth, 0 dB input attenuation.

Noise Floor Extension (Option	on NF2) improves DAN	L by 8 to 12 dB, for s	tandard path.

	10 MHz	–154 dBc/Hz	–154 dBc/Hz	–157 dBc/Hz

Nominal Phase Noise at Different Center Frequencies with RBW Selectivity Curves, Optimized Phase Noise, Versus Offset Frequency

not observed, phase noise, computed from the 25.2 GHz observation. See the footnotes in the Frequency Stability section for the details of phase noise performance versus center frequency.

**Figure 3.** Nominal PXA phase noise at various center frequencies. RBW curves added to show impact of analyzer phase noise in resolving two closely spaced signals for various RBW filter choices.

## **IQ** Analyzer

All specifications based on preselector by-passed (RF Path either Microwave Preselector Bypass or Full Bypass) (except <3.6 GHz), unless otherwise noted. IF Paths at 10, 25, 40, and 255 MHz are enabled by any of R10, R15, or R20. Each bandwidth option includes and enables all others with lesser bandwidth, e.g. instruments with R20 also have R15 and R10 licenses, plus B2X, B40, and B25 paths.

## 10 MHz Analysis Bandwidth (Standard)

Specifications on this bandwidth apply with center frequencies of 10 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB.

10 MHz analysis bar	•	•						
Analysis bandwidth ra	ange	10 Hz to 10	) MHz

# 1 GHz Analysis Bandwidth (Option R10)

Specifications on this bandwidth apply with center frequencies of 700 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB. IF frequency response and IF amplitude accuracy performance between 18 and 26.5 GHz for Type-N connectorized instruments is nominal.

Analysis bandwidth rai	nge		10 Hz to 1.0 GHz					
Tuning range 2 Hz to 55						(½*BW), by image fold Over-range tuning to 5	tuning range limited to < ing and LO feedthrough 5.5 GHz allowed, but rformance not specified.	
IF frequency			5490 MHz (1 <sup>st</sup> IF, cer 690 MHz (Final IF)	nter frequency $\leq 3$				
ADC sample rate	ample rate 4.8 GSa/sec							
ADC resolution			14 bits					
Final data format			I & Q pairs, 32 bits each, 64 bits/Sa					
Capture memory			16 GB 32,000,001 sample pairs

Full scale (ADC clipping); preselector bypassed, LNA off, PA off (nominal)

> 48.55 to 55 GHz
Full scale (ADC clipping level) is a rough estimate of the signal level at which ADC overload occurs. Actual clipping levels vary significantly; this is only a guide. Mixer level is RF input level less attenuation setting.

# 1.5 GHz Analysis Bandwidth (Option R15)

Specifications on this bandwidth apply with center frequencies of 950 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB. IF frequency response and IF amplitude accuracy performance between 18 and 26.5 GHz for Type-N connectorized instruments is nominal.

1.5 GHz analysis ban Analysis bandwidth rai	•••		10 Hz to 1.5 G	47						
Tuning range			2 Hz to 55 GHz			In practice, low end of tuning range limited to < (½*BW), by image folding and LO feedthrough. Over-range tuning to 55.5 GHz allowed, but witho corrections, performance not specified.

# 2 GHz Analysis Bandwidth (Option R20)

Specifications on this bandwidth apply with center frequencies of 950 MHz and higher. All specifications apply under the following settings unless otherwise specified: preselector bypassed, PA off, LNA off, IF gain = Auto, IF gain offset = 0 dB. IF frequency response and IF amplitude accuracy performance between 18 and 26.5 GHz for Type-N connectorized instruments is nominal.

2.0 GHz analysis bandwidth (Option I	R20)	
Analysis bandwidth range	10 Hz to 2.0 GHz	
Tuning range	3.5 to 55 GHz	In practice, low end of tuning range limited to < (½*BW), by image folding and LO feedthrough. Over-range tuning to 55.5 GHz allowed, but without corrections, performance not specified
IF frequency	1200 MHz (center)	
ADC sample rate	4.8 GSa/sec	
ADC resolution	14 bits	
Final data format	I & Q pairs, 32 bits each, 64 bits/Sa	
Capture memory	16 GB	
IQ Analyzer	32,000,001 sample pairs	
Length (IQ sample pairs)	4,294,967,280 samples with 32-bit data packing	
Capture time (time record length)	1.79 s at full 2.0 GHz BW with 32-bit data packing	Capture time increases linearly with decrease in bandwidth

IF frequency response (span ≤ 2 GHz), microwave preselector bypass path (MPB)

50 to 55 GHz	≤ 2000 MHz		Off	3.00°			
IF dynamic range (nominal)							
SFDR (spurious-free dynamic range) (ADC related spurious)	–65 dBc			Signal at –22 dBF	S, anywhere in full	IF width	
IF residual responses (relative to	o full scale, input termin	ated) (nominal)					
3.5 to 34.5 GHz			–85 dBFS				
34.5 to 50 GHz			-65 dBFS				
Full scale (ADC clipping): presel	actor hypassed INA of	ff DA off (nomin	nal)				

Full scale (ADC clipping); preselector bypassed, LNA off, PA off (nominal)

Full scale (ADC clipping level) is a rough estimate of the signal level at which ADC overload occurs. Actual clipping levels vary significantly; this is only a guide.	
Mixer level is RF input level less attenuation setting.

# **General Specifications**

Temperature range			
Operating			
Altitude ≤ 2,300 m	0 to 55 °C		
Altitude = 4,600 m	0 to 47 °C		
Derating	The maximum operating temperature derates linearly from altitude of 4,600 m to 2,300 m		
Storage	-40 to +70 °C		
Altitude	4,600 m (approx. 15,000 feet)		
Maximum relative humidity	95% up to 40°C, non-condensing. From 40 °C to 55 °C, the maximum % Relative Humidity follows the line of constant dew point.		
Environment			
Indoor use			
Power requirements			
Voltage and frequency (nominal)	100/120 V, 50/60/400 Hz     The instruments can operate with mains supply voltage fluctuations       220/240 V, 50/60 Hz     ± 10% of the nominal voltage		
Rated input power	630 W (maximum)		
Power consumption, on	560W (typical)		
Power Consumption, Standby	45 W		
Display			
Resolution	1280 x 768		
Size	269 mm (10.6 in.) diagonal (nominal) capacitive multi-touch screen		
Data storage			
Internal	Removable solid-state drive (≥ 256 GB)		
External	Supports USB 3.0/2.0 compatible memory devices		
CPU	Option PC8: Modular, upgradeable; Intel i7, 6-core, 1.9 GHz clock, 32 GB DDR4 DRAM; includes secure memory for instrument calibration data Option PCA: Modular; Intel i7, 6-core, 2.7 GHz clock, 32 GB DDR4 DRAM; includes secure memory for instrument calibration data.		
SSD (solid-state drive)	≥256 GB, removeable		
Operating system	Windows-10, Enterprise		
Weight			
Net	27 kg (59 lbs) (nominal)		
Shipping	39 kg (86 lbs) (nominal)		
Dimensions			
Height	177 mm (7.0 in)		
Width	426 mm (16.8 in)		
Length	556 mm (21.9 in)		
Calibration cycle			
The recommended collibration and is in			

The recommended calibration cycle is one year; calibration services are available through Keysight service centers.

# Inputs and Outputs

## Front panel

RF input			
Standard (Option 508, 513, 526)	Type-N female, 50 $\Omega$ nominal		
Standard (Option 544, 550)	2.4 mm male, 50 Ω nominal		
Standard (Option 555)	1.85mm male, 50 Ω nominal		
Option C35 (with Option 526 only)	3.5 mm male, 50 $\Omega$ nominal		
External mixing (Option EXM)			
Connector	SMA fomale 50.0 nominal		
Functions	SMA, female, 50 Ω, nominal Diplexer, LO output, IF input		
IF Input	Diplexer, LO output, if input		
Maximum safe level	+7 dBm		
	$F BW \leq 25 MHz$		322.5 MHz
Center frequency	40 MHz IF path		250 MHz
	255 MHz IF path		690 MHz
	1 GHz IF path	<b>D</b> (A)	690 MHz
Bandwidth	Supports all optional IFs up to and includin	ig R10	
ADC clipping level	25, 255, or 1 GHz IF paths		–15 dBm (nominal)
	40 MHz IF path		–20 dBm (nominal)
1 dB gain compression	–2 dB (nominal)		
Gain accuracy (The amplitude accuracy of	IF BW	Full range	20 to 30 °C
a measurement includes this term and the	IF BW $\leq$ 25 MHz (swept and	±2.5 dB	±1.2 dB
accuracy with which the settings of	narrowband)		
corrections model the loss of the external mixer.)	Wider IF BW	±1.2 dB (nominal)

	690 MHz	±127.5 MHz	0.18 dB
Noise figure (322.5 MHz, swept operation high IF gain)	11 dB (nominal)		
VSWR	See Figure 4		
LO output			
•			
Frequency range	3.75 to 14.1 GHz		
	The LO output port power is compatible with Keysight M1970 and 11970 Series mixers except for the 11970K. The power is specified at the connector. Cable loss will affect the power available at the mixer. With non-Keysight/Agilent mixer units, supplied loss calibration data may be valid only at a specified LO power that may differ from the power available at the mixer. In such cases, additional uncertainties apply.		
Output power	Center frequency	Full range	20 to 30 °C
· · · · · · · · · · · · · · · · · · ·	3.75 to 8.72 GHz (LO Doubler = Off settings)	14 to 18.8 dBm	+15 to 18 dBm
	7.8 to 14.1 GHz (LO Doubler = On setting. Fundamental frequency = 3.9 to 7.05 GHz)	N/A	+14 to 18.5 dBm
Second Harmonic	-20 dB (nominal) (LO Doubler = Off settings)		
Fundamental feedthrough and undesired harmonics	-30 dB (nominal) (LO Doubler = On setting, Fundamental frequency = 3.9 to 7.05 GHz)		
VSWR (The reflection coefficient has a Rayleigh probability distribution from 3.75 GHz to 14.1 GHz with a median VSWR of 1.22:1.)	1.8:1 (nominal)	<u> </u>	

Internal calibrator output				
Cal out (Option 508, 513, 526)	SMA female, 10 MHz to 26.5 GHz internal calibrator output			
Cal out (Option 544, 550)	2.4 mm female, 10 MHz to 50 GHz internal calibrator output			
Cal out (Option 555)	1.85 mm female, 10 MHz to 55 GHz internal calibrator output			
Probe power

Connector		IEEE-488 bus connector			
GPIB codes		SH1, AH1, T6, SR1, RL1, PP0, DC1, C1, C2, C3, C28, DT1, L4, C0			
GPIB mode		Controller or device			
Thunderbolt (Option PC	A CPU)				
Connector		USB Type C, female (2 ports)			
Output power		5 V, 1.0 A (max.)			
PCle X4 interface					
Connector PCIe X4, female					
Digital bus interface					
Connector		MDR-80 This port is intended for use with the Agilent/Keysight N5105 and N5106 products only. It is not available for general purpose use.			
LAN TCP/IP interface		h h			
		Option PC8, PCA: 1000Base	-T		
Standard		Option PCA: 10GBase-T			
Connector		RJ45 Ethertwist			
Optical Data Interface (C	)DI)				
ODI physical interface c					
Specification		ODI-1: Physical Layer Speci	fication Revision 3.0		
Number of ODI ports					
Connector		MPO style, 2 rows of 12 fibe	positions		
Lane rate		12.5 Gbit/s	•		
Interlaken burst max		2048 byte			
Flow control					
Port directionality		Producer only			
Port aggregation		Not applicable			
Interlaken channels		1 channel (Ch 0)			
Streaming data rate		Up to 9.6 GByte/s			
ODI data format capabili	ity				
Specification	ODI-2: Transport Layer, Revision 3.0, ODI-2.1: High Speed Data Formats, Revision 3.0				
Packet types supported Data packets Context packets					
Context packets		Signal context packets supported: Data includes bandwidth, IF frequency, RF frequency, reference level, sample rate, overrange count			
Control packets		Not used			
Timestamp support		Supported, time of day Typical accuracy: System clock ± 20us			
Trailer bit support		Overrange Spectral inversion Incomplete packet			
Data format class IDs sup	ported	See table below			
Signal data packet size		Data size 65,536 bytes 16,384 16-bit IQ samples per packet 8,192 32-bit IQ samples per packet			
Supported data format a	ind class ID table				
Item packing field width	Data item (signed)	Real or IQ	Data type identifier	Notes	
32-bit	16-bit	IQ	0x18	16-bit I&Q for bandwidths > 255.176 MHz	
64-bit	32-bit	IQ	0x20	32-bit I&Q for bandwidths ≤ 255.176MHz	
Wide IF out (enabled by	option CRW)				
Connector		SMA, female, 50 $\Omega$ nominal			
AUX IF output					
Connector		SMA female, shared by CR3	, CRP and ALV		
Impedance		50 Ω nominal			
AUX IF output, second I	F output (option CR3)				
SA mode		322.5 MHz center frequency			
IQ analyzer with IF bandw	ridth ≤ 25 MHz	322.5 MHz center frequency			
IQ analyzer with IF path 4		250 MHz center frequency			
IQ analyzer with IF path 2		690 MHz center frequency			
IQ analyzer with IF path 1.5 GHz		950 MHz (band 0), 1200 MHz (band 1 to 4)			

IQ analyzer with IF path 2 GHz	1200 MHz center frequency		
Conversion gain (SA mode and up to 40 MHz bandwidth)	-1 to +4 dB (nominal) plus RF frequency response		
Bandwidth (-6 dB)			
< 3.6 GHz	Up to 1 GHz (nominal)		
> 3.6 GHz, with preselector	Depends on RF center frequency		
> 3.6 GHz, with preselector bypass	100-800 MHz ±3 dB (nominal)		
AUX IF output, programmable (Option CRI	P) (only available in swept spectrum analysis or IF path $\leq$ 40 MHz	2)	
Bandwidth			
Highpass corner frequency	5 MHz (nominal) at −3 dB		
Lowpass corner frequency	120 MHz (nominal) at -3 dB		
Output at 70 MHz			
< 3.6 GHz or > 3.6 GHz with preselector			
bypassed	100 MHz nominal		
Preselected band	Depends on RF center frequency		
IF output center frequency	Depends on the center inequency		
Range	10 to 75 MHz (user selectable)		
Resolution	0.5 MHz		
Conversion gain Lower output frequencies	-1 to +4 dB (nominal) plus RF frequency response		
Residual output signals	Subject to folding ≤ −88 dBm (nominal)		
AUX IF output, Fast Log Video (Option AL	v)		
General Port Specifications			
Connector	SMA female		Shared with other options
Impedance	50 Ω nominal		
Fast Log Video Output			
Output voltage	Open-circuit voltages		
Maximum	1.6 V at –10 dBm nominal		
Slope	$25 \pm 1 \text{ mV/dB nominal}$		
Rise Time	15 ns nominal		
Fall Time	40 ns nominal		
Y-axis video output (Option YAV)			
General port specifications	DNO (constr	01-	
Connector	BNC female	Sna	red with other options
Impedance	50 Ω nominal		
Screen video			
Display scale types	Log or Lin	"Lin	" is linear in voltage
Log scales	All (0.1 to 20 dB/div)		
Modes	Spectrum analyzer only		
Gating	Gating must be off		
Output scaling	0 to 1.0 V open circuit, representing bottom to top of screen		
Offset	± 1% of full scale (nominal)		
Gain accuracy	± 1% of output voltage (nominal)		
Log Video (log envelope) Output Amplitude Range (terminated with 50 Ω)			
Maximum	1.0 V (nominal) for –10 dBm at the mixer		
Scale factor	Output changes 1 V per 192.66 dB change in the signal envelop	be	
Bandwidth	Set by RBW		
Operating conditions	Select Sweep Type = Swept		
Linear Video (AM demod) Output			
Amplitude Range (terminated with 50 $\Omega$ )			
Maximum	1.0 V (nominal) for signal envelope at the reference level		
Minimum			
Scale factor	If carrier level is set to half the reference level in volts, the scale factor is 200% of carrier level per volt. Regardless		
	of the carrier level, the scale factor is 100% of reference level pe	or voit.	
Bandwidth	Set by RBW		

# **Regulatory Information**

This product is designed for use in INSTALLATION CATEGORY II and POLLUTION DEGREE 2 and MEASUREMENT CATEGORY NONE per IEC 61010-1, and 664 respectively.

This product has been designed and tested in accordance with accepted industry standards and has been supplied in a safe condition. The instruction documentation contains information and warnings which must be followed by the user to ensure safe operation and to maintain the product in a safe condition.

This product is intended for indoor use.

CE	The CE mark is a registered trademark of the European Community (if accompanied by a year, it is the year when the design was proven). This product complies with all relevant directives.
ccr.keysight@keysight.com	The Keysight email address is required by EU directives applicable to our product.
CAN ICES/NMB-001(A)	"This ISM device complies with Canadian ICES-001." "Cet appareil ISM est conforme a la norme NMB du Canada."
ISM 1-A (GRP.1 CLASS A)	This is a symbol of an Industrial Scientific and Medical Group 1 Class A product. (CISPR 11, Clause 4)
e SP us	The CSA mark is a registered trademark of the CSA International.
$\textcircled{\begin{time}{0.5ex}}{0.5ex}$	The RCM mark is a registered trademark of the Australian Communications and Media Authority.
UK CA	UK conformity mark is a UK government owned mark. When affixed to the product is declaring all applicable Directives and Regulations have been met in full.
X	This symbol indicates separate collection for electrical and electronic equipment mandated under EU law as of August 13, 2005. All electric and electronic equipment are required to be separated from normal waste for disposa (Reference WEEE Directive 2002/96/EC).
40	China RoHS regulations include requirements related to packaging and require compliance to China standard GB18455-2001.
0	This symbol indicates compliance with the China RoHS regulations for paper/fiberboard packaging.
¢́≊́γ	More than one person is required to safely lift or carry this instrument. Alternately a mechanical lift can be used to eliminate the risk of personal injury.
	South Korean Certification (KC) mark; includes the marking's identifier code: R-R-Kst-xxxxxx
*	This symbol indicates the presence of a class 1 Laser device.

### Safety and Regulatory Markings Which May Be on the Product

### Regulatory, Environmental and Certifications

EMC	Complies with the essential requirements of the European EMC Directive and the UK Electromagnetic Compatibility Regulations 2016 as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity): IEC/EN 61326-1 CISPR 11 Group 1, Class A AS/NZS CISPR 11 ICES/NMB-001 UKCA This ISM device complies with Canadian ICES-001 Cet appareil ISM est conforme a la norme NMB-001 du Canada NOTE: This is a sensitive measurement apparatus by design and may have some performance loss (up to 40 dB in the range 80 MHz to 6 GHz; above the Spurious Responses, Residual Responses specification of –100 dBm) when in the presence of ambient electromagnetic field of 3V/m.		
	This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference. This EMC statement applies to the equipment only for use in business environment.		
	사용자안내문		
South Korean Class A EMC declaration	이 기기는 업무용 환경에서 사용할 목적으로 적합성평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.		
	※ 사용자 안내문은 "업무용 방송통신기자재"에만 적용한다.		
Safety	Complies with the essential requirements of the European Low Voltage Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity): IEC/EN 61010-1 Canada: CSA C22.2 No. 61010-1 USA: UL std no. 61010-1 WARNING "WARNING: EMBEDDED CLASS 1 INVISIBLE LASER RADIATION. DO NOT EXPOSE USERS OR VIEW DIRECTLY WITH TELESCOPES"		
Acoustic statement (European Machinery Directive)	Acoustic noise emission LpA < 70 dB Operator position Normal operation mode per ISO 7779		
	Acoustic noise - more information (Values given are per ISO 7779 standard in the "Operator Sitting" position)		
	Ambient temperature (< 40 °C) Nominally under 55 dBA Sound Pressure. 55 dBA is generally considered suitable for use in quiet office environment Ambient temperature (≥ 40 °C) Nominally under 65 dBA Sound Pressure. 65 dBA is generally considered suitable for use in noisy office environment		
Environmental stress	Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

# **Additional Resources**

The N9032B PXA X-Series signal analyzer isn't the only thing that will bring you to RF breakthroughs. Powerful software drives your measurements while finely tuned hardware takes them to new heights. In order to move the measurement plane to your device under test, reach even higher levels of measurement accuracy, and achieve 2 GHz of signal analysis and generation, the N9032B PXA partners with the:

- PathWave X-Series measurement applications and PathWave Vector Signal Analysis (VSA)
- U9361 RCal receiver calibrator for improved receiver test system accuracy by 10X
- M9484C VXG signal generator for wideband stimulus and response testing

N9032B PXA Signal Analyzer Configuration Guide (3121-1216.EN)

# **Confidently Covered by Keysight Services**

Prevent delays caused by technical questions and reduce system downtime due to instrument maintenance and repairs with Keysight Services. Keysight Services are here to support your test needs with expert technical support, instrument repair and calibration, software support, training, alternative acquisition program options, and more.

A KeysightCare agreement provides dedicated, proactive support through a single point of contact for instruments, software, and solutions. KeysightCare covers an extensive group of instruments, application software, and solutions and ensures optimal uptime, faster response, faster access to experts, and faster resolution.

### **Keysight Services**

Offering	Benefits
KeysightCare	KeysightCare provides elevated support for Keysight instruments and software, with access to technical support experts that respond within a specified time and ensure committed repair and calibration turnaround times (TAT). KeysightCare offers multiple service agreement tiers, including KeysightCare Assured, Enhanced, and Application Software Support. See the KeysightCare data sheet for details.
KeysightCare Assured	KeysightCare Assured goes beyond basic warranty with repair services that include committed TAT and unlimited access to technical experts.
KeysightCare Enhanced	KeysightCare Enhanced includes all the benefits of KeysightCare Assured plus Keysight's accurate and reliable Calibration Services, accelerated, and committed TAT, and technical response.
Keysight Support Portal & Knowledge Center	All KeysightCare tiers include access to the Keysight Support Portal where you can manage support and service resources related to your assets such as service requests, and status, or browse the Knowledge Center.
Education Services	Build confidence and gain new skills to make accurate measurements, with flexible Education Services developed by Keysight experts. Including Start-up Assistance.
Alternative acquisition of	ptions
KeysightAccess	Reduce budget challenges with a leased-based subscription service, that offers low monthly payments, enabling you to get the instruments, software, and technical support you want for your test needs.

### **Recommended services**

Maximize your test system up-time by securing technical support, repair, and calibration services with committed response and turnaround times. 1-year KeysightCare Assured is included in every new instrument purchase. Obtain multi-year KeysightCare upfront to eliminate the need for lengthy and tedious paperwork and yearly requests for maintenance budget. Plus, you benefit from secured service for 2, 3, or 5 years.

Service	Function		
KeysightCare Enhanced*	Includes tech support, warranty and calibration		
R-55B-001-1	KeysightCare Enhanced – Upgrade 1 year		
R-55B-001-2	KeysightCare Enhanced – Extend to 2 years		
R-55B-001-3	KeysightCare Enhanced – Extend to 3 years (Recommended)		
R-55B-001-5	KeysightCare Enhanced – Extend to 5 years (Recommended)		
KeysightCare Assured	Includes tech support and warranty		
R-55A-001-2	KeysightCare Assured – Extend to 2 years		
R-55A-001-3	KeysightCare Assured – Extend to 3 years		
R-55A-001-5	KeysightCare Assured – Extend to 5 years		
Start-Up Assistance			
PS-S40-01	Included – instrument fundamentals and operations starter		
PS-S40-04	Recommended – instrument fundamentals and operations starter		
PS-S40-02	Optional, technology & measurement science standard learning		

\* Available in select countries. For details, please view the datasheet. R-55B-001-2/3/5 must be ordered with R-55B-001-1.

Keysight enables innovators to push the boundaries of engineering by quickly solving design, emulation, and test challenges to create the best product experiences. Start your innovation journey at www.keysight.com
